

The volume contains some papers presented at the 5° workshop on “Models and Learning in Clustering and Classification” organized by the Department of Economics and Business of the University of Catania, Italy in September 2020. The aim of the workshop is two-fold. First, to provide a focus on the state-of-the-art research in the field of statistical models and learning techniques for supervised and unsupervised classification. Secondly, to provide a forum of scientific discussions and comparisons among young and senior researchers in different areas of statistics and data science.
